INSTALLING A SHADE SAIL, WHAT'S INVOLVED?

Step 1

MEASURE AND QUOTE

After booking a time that suits, one of our team will meet with you to discuss the design of your sail, taking into account specific requirements, building design and orientation. They will then measure. The outcome of your friendly consultation is a speedy, same day quote.

Step 2

QUOTE APPROVAL

Once a colour is selected, sign and return work agreement and pay deposit.

Step 3

FITTING AND INSTALLATION

Our installation crew will come out to your site and install all steelwork and fittings, included but not limited to;

- Brackets
- Wall mounts
- Fixing poles
- Dingo digging
- Roof masts
- Concrete set

Whilst each install is personalised so times may vary, a standard install is one working day.

Step 4

MEASURE SAIL

Upon completion of the install our friendly crew will measure your sail. All our sails are custom made to ensure a perfectly taut sail with minimal movement and a flush, sleek look. Measuring takes place on the same day as installation.

Step 5

CRAFTING THE SAIL

Once the sail design software has verified the installers' measurements our fabrication team will mark, cut and sew your sail by hand.

Step 6

FLYING AND TENSIONING SAIL

With your custom hand made sail ready to go, our team will come onsite to fly the sail and tension it appropriately for a sleek finish. Typically this will take about one hour.
